SUMMARY

Flutter developer with 3+ years shipping production apps — five live on the App Store and Play Store, including the user-facing app for an EV charging network now launching across Abu Dhabi. I build with Clean Architecture and Bloc/Cubit, handle real-time work over WebSocket and OCPP, and cover the critical paths with bloc_test and Mockito. I also use AI coding tools like Claude Code and Cursor as part of my daily workflow.

EXPERIENCE

Flutter Engineer (Mid-Level)

Jan 2025 – Present

AI Manarah Holding Group, Abu Dhabi, UAE

- Built the Easy Touch EV charging app (user platform), live on the App Store and Play Store — drivers find chargers on Google Maps, run live charging sessions over WebSocket/OCPP, and pay in-app. The network is in its launch phase, with the first 10 chargers going live. Unit-tested the Cubit state transitions and OCPP handlers with bloc_test and Mockito.
- Built a branded whiteboard app for the company's interactive screen product — freehand drawing with CustomPainter and the Canvas API at 60 FPS, Riverpod for state, and Hive to persist vector paths for near-instant save/load. Integrated with an AI backend that recognizes a sketch and returns the closest clean or geometric shape.
- Rebuilt the Quarak QR app from scratch, replacing an outdated Play Store listing with a cleaner, modern version (used Figma Make alongside Claude Code during the build).
- Built and deployed four production websites for the company with Next.js 15 — futuregulf.ae (bilingual AR/EN with full RTL), plus dyfmotors.ae, commercialoxforduae.ae, and westernbeach.ae — handled SEO and Google Search Console setup, and deployed to a UAE server via cPanel.
- Set up the company's social media operation from scratch: content pipeline, tooling requirements, and delivery process.

Mobile Application Developer

Feb 2022 – Dec 2024

Esmos Tech, Cairo, Egypt — software outsourcing; delivered client projects for businesses outside Egypt

- Built Flutter apps across e-commerce, IoT, healthcare, and rental, using Clean Architecture for modularity and testability.
- Did a lot of local-first work: Hive for fast NoSQL caching, with GetStorage and SQLite for relational data.
- Built mapping screens with Google Maps (custom markers, polylines) and AI-driven personalization features.
- Handled end-to-end payment integration and secure API communication, with multi-currency and localized payment support.
- Built the Flutter app for an AI fitness & nutrition product that suggests a diet per user from their workout data, integrating with a Node.js/MongoDB backend over real-time sync.

Earlier: Marketing & Community

2020 – 2023

- Social Media Marketing Specialist at Artedge (2021–2022); marketing internship at Blue Business (2020); Head of PR for the Google Developer Student Club (2022–2023).

SELECTED PROJECTS

Easy Touch EV Charger — Flutter, Cubit, Dio, WebSocket, OCPP, Maps, Mockito, bloc_test [App Store](#) · [Play Store](#)

- Real-time charger map for Abu Dhabi's EasyCharger network with live session management; unit-tested Cubit and OCPP handlers. Network currently in launch (first 10 chargers).

WhiteBoard — Flutter, Riverpod, Hive, CustomPainter, AI backend integration

- Branded whiteboard app for the company's interactive screen product — 60 FPS freehand drawing with persistent vector storage, plus an AI feature that recognizes a sketch and returns the closest clean or geometric shape (Flutter side, integrated with an AI backend).

Innvii Rent — Flutter, GetX, GetStorage, HTTP, MVC [Play Store](#)

- Car rental app — browse available cars, view pricing, and book, with efficient local caching for fast, offline-friendly listings.

AI Fitness & Nutrition — Flutter, Cubit, Dio, MVVM (Node.js/MongoDB backend) [Client project](#)

- Built the Flutter app matching workout data to nutrition recommendations, integrated with a Node.js/MongoDB backend over real-time sync.

Smart Greenhouse — Flutter, Bloc, Socket.IO, MVVM [Graduation project · 2023](#)

- Mobile app for full remote control of a greenhouse — adjust and automate the growing conditions in real time over Socket.IO, with low-latency control. University graduation project (2023).

Quarak QR Code — Flutter, Figma, Claude Code [Play Store](#)

- Full redesign and rebuild — from an outdated MVP to a polished production app.

TECHNICAL SKILLS

- **Mobile:** Flutter, Dart; App Store & Play Store publishing; CI/CD (Fastlane, Codemagic, GitHub Actions)
- **Architecture & State:** Clean Architecture, MVVM, MVC; Bloc & Cubit (also Riverpod, GetX)
- **Testing:** flutter_test, bloc_test, Mockito, TDD, unit testing
- **APIs & Real-Time:** REST, Dio, Retrofit, WebSocket, Socket.IO, OCPP
- **Storage:** Hive, SQLite, GetStorage, Shared Preferences, Firebase
- **Web & Backend:** Next.js 15, React, Tailwind CSS, Node.js, MongoDB
- **Tools:** Git, GitHub, Figma, Android Studio, Xcode, Fastlane
- **AI Tools:** Claude Code, Cursor, Antigravity

EDUCATION

B.Sc. Computer Science

2019 – 2023

Misr Higher Institute for Commerce and Computers

CERTIFICATIONS & LEARNING

Flutter coursework (Udemy & instructor platforms) covering Bloc & MVVM, Clean Architecture, testing, payment integration, CI/CD with Retrofit, and full e-commerce builds (GetX/Firebase).

Currently learning: Node.js (backend), as a step toward a fullstack mobile profile.
